

INFRARED IRON REBUILDING TREATMENT

A state-of-the-art technology that harnesses the power of ultrasonic vibrations and cold fusion therapy!

The special infrared iron helps products deeply penetrate the hair's cortex and cuticle layers, taking your in-salon treatments to the next level!

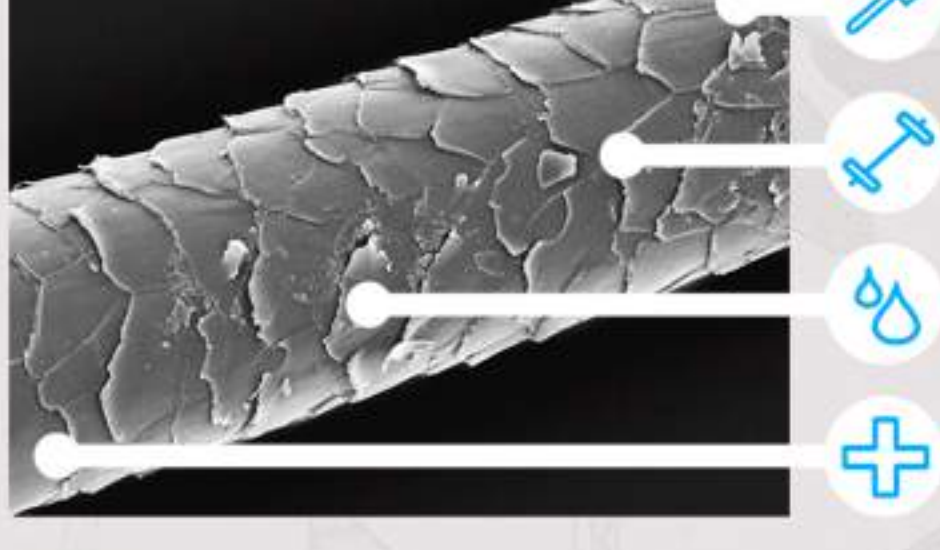

The treatment helps:

- + Moisturize and soften the hair
- + Seal cuticle scales and restore hair fibers
- + Supply amino acids to strengthen the hair
- + Restore hair lipids and protect from further damage
- + Prevent split ends, keep hair more elastic, & preserve its color over time

This treatment repairs damaged hair due to repeated chemical treatments, mechanical stresses, environmental aggressions and heat tools. The first step to rebuilding damaged hair is to regenerate the integral constituents that it has lost.

The 4 Constituents for Healthy Hair

Proteins

Supplying amino acids to the cuticle and cortex helps repair the keratin chain inside the hair fiber

Trace Minerals

A concentrate of 5 mineral salts (iron, magnesium, zinc, copper and silicon) helps strengthen and reinforce the hair structure

Moisture

Hyaluronic acid aids in allowing the hair to capture and preserve water; leaving the hair silky, softer, and radiant

Lipid Reserves

Restoring the hair lipid components creates a protective shield around the cuticle while increasing elasticity and resistance to breakage

The Hair Repair Specialists

Phytokeratin Complex

Hyalominerals Complex

Ceramides F Complex

Prodew 500TM

Ethical Teak & Mahogany

Amazonian Butter Blend

Iris Extract

Lavender Essential Oil

Basil Extract & Essential Oil
